## Abstract:

The present article attempts by reviewing social theories, with special emphasis on "sustainability" and "socio-cultural approaches in architecture" to reach a synthesis concept such as social sustainability". The Next step is to deal with social sustainability in housing, in order to limit the spectrum of the research. And finally, the views of the authors of this article shall be expounded with regard to social sustainability.

Moreover, some methods of achieving social sustainability especially within the context of sustainable design with respect to social dimension is introduced. Those methods include: "the adaptation of behavioral models to physical models", "increasing the quality of the space", and making spaces flexible".
